

The Key to Product Configuration and Pricing

## Avenue from VC

One of the software tools in the eSpline product family, "Avenue from VC", is used to download or export SAP configurable product models outside SAP.

Product model data includes materials, characteristics, classes, object dependencies, and all other objects required to run product configuration. The resulting knowledge bases may be imported into other eSpline products and partner software applications.

eSpline's "Avenue from VC" is a new software tool that gathers SAP Variant Configurator product models for one or more products from SAP, and exports them for use outside SAP.

*Product Models generated by Avenue from VC may be saved in widely-used formats such as XML, SQL, HTML, and Excel.*

Avenue from VC makes the exported product models available for partner application software such as Configit Software's *VT-Distiller Suite for SAP-VC*.

Avenue from VC is the product model extraction component of Configit Software's *VT-Distiller Suite for SAP-VC*.

### Partners use Avenue from VC

Using Configit's patented technology, Virtual Tabulation®, *VT-Distiller Suite for SAP-VC* maps, transforms, and compiles the exported SAP Variant Configurator product models received from Avenue from VC.

The result? A configurator that behaves like SAP-VC, but operates on mobile devices outside SAP, on the web, or integrated into software solutions.

Since all SAP configurable product data is automatically exported to Configit's *VT-Distiller Suite for SAP-VC*, there is just one leading system (SAP) where modelers create and maintain product definitions. No need for costly and error-prone maintenance of the same models in two parallel systems, as required by other non-SAP configurator applications.

When changes are made to the SAP-VC model, the configurable product data is exported, compiled and re-deployed.

This doesn't take days each time; think minutes.

So, by exporting and interpreting the SAP configurable product models, there is no need to maintain multiple definitions of the product, and the SAP VC functionality is preserved.

[More information on the other side...](#)

As a result, projects to implement the Variant Configurator capability in a mobile environment *using VT Distiller for SAP* are now accomplished in a few months, not years.

Customers no longer need to spend hundreds of thousands or millions for middleware, hardware and software that may or may not be used, and most importantly, you leverage your investment in the SAP-VC.

This is only offered by Configit Software or eSpline

### Set your Configuration Data Free

- ❑ Export zero, single, and multi-level [nested] configurable materials.
- ❑ Export a complete knowledge base associated with a configurable product based on material, plant and BOM
- ❑ Automated process eliminates need to manually export the SAP VC KB

### SAP Customers can benefit, too

*Avenue from VC* can be used by **SAP Customers** as well. Use it to export the SAP VC Knowledge base so that complex product configuration data can be reused for custom applications.

For example, eSpline is *using Avenue from VC* to expose a client company's configuration logic so that management can be sure that the product definition inside SAP matches the product definition in their Product Data Sheets they provide their customers. No more excuses for being incorrect.

Yet another is making sure that Product Management can easily compare their configuration logic to the company's online catalog. Just how much is this worth? Talk to your Product Managers and customers, they can answer that.

### How else can Avenue from VC be used?

Talk to us.

We have software applications and tools that will be using *Avenue from VC* to help unleash your investment in the SAP VC knowledgebase for analytics, custom reporting and several other projects.

eSpline specializes in developing standard and customized software tools for SAP customers with complex products and services, so if you have a special need to leverage your VC product data, contact us.

If you wish, you are invited to participate in our Beta Program for evaluating these new products.
