

The Key to Product Configuration and Pricing

eSpline has a focus on your Product Configuration

Today there are very few companies that specialize only in assisting companies with complex products and services, let alone provide expertise in SAP configuration software products and implementation services. eSpline is one of these few companies.

What We Do...

eSpline was founded with a primary purpose to better service SAP Variant Configurator (VC) and Internet Pricing & Configurator (IPC) customers and to build software tools to supplement and improve the experience with configurator applications.

Our goal is to leverage our expert knowledge and experience of SAP and many other configurator software solutions, and offer a more robust service offering. We provide a SAP customer the needed expertise to initiate, plan, build, manage, train and implement a SAP configurator project, large or small. eSpline provides the staffing and expertise and will take the responsibility to make the project a success.

eSpline specializes in solving complex configuration problems for our customers and software partners using specifically tailored and eSpline standard software applications, tools for SAP VC & IPC customers, Knowledgebase extraction technology, and custom developed applications using Java, C++ and .NET

Software Development

eSpline offers a variety of software tools specifically designed for customers and partners to aid them to have improved access to SAP configuration product data, movement of the SAP configuration knowledge base and integration into either R/3 or MySAP ERP.

A primary focus is to enable SAP VC or IPC configurator customers to mine and better utilize information in their SAP Variant Configurator

knowledge base and provide easy access to that information. As an example, eSpline developed a software tool that extracts, transforms and makes the logic inside SAP VC ready for re-use outside SAP. Another includes a plug and play tool that moves the SAP VC knowledge base.

In order to use the SAP application best, it has to have information it understands. eSpline has helped customers and partners map, translate, and import quote, order, and configurable product data to SAP. Additionally, eSpline has developed custom software to extract configurable product data from third party or legacy configuration software applications,

transformed, mapped and uploaded those rules to SAP.

Our experience also includes assisting SAP in the development of their two configuration engines, the SCE and SPE which are included in the IPC.

The Key to Product Configuration and Pricing

Implementation Services

First and foremost, eSpline ensures that we will provide a standard of service and excellence offered by few other focused configuration oriented firms. 100% customer satisfaction is our goal.

eSpline offers Best Practice VC & IPC modeling services, SAP VC & IPC Training Workshops that focus on Modeling or Technical issues, SAP VC/IPC implementation management and we will staff your project. Our expertise was achieved with real customer projects in a variety of customer settings and we solved problems for those customers.

Training

The eSpline training offering is very different from the conventional SAP training courses that you may have experienced.

First, there is no formal SAP offering for the IPC; eSpline offers two workshops. Second, eSpline offers Advanced Mode training; there is no similar SAP workshop offering. Third, eSpline provides all training on the customer's premises.

Fourth, our trainers have real-world experience with implementing SAP VC and IPC and are typically our most senior consultants. Fifth, we have delivered a variety of courses or workshops specific to a customer's SAP VC and

IPC needs. If a company has a specific training requirement not covered by the standard workshop offering, eSpline will customize a training workshop to meet those needs.

Since all training is delivered on site, the customer minimizes travel expenses and optimizes the employees time in the office.

Implementation and Development Partner

Aside from implementation projects for SAP, eSpline is a preferred implementation partner for Configit Software's "VT Distiller Suite for SAP". eSpline also contributed to this product suite with our SAP Knowledge base extraction technology "Avenue from VC".

Contributor to SAP CWG

One eSpline partner is the current President of the CWG and two partners have been active participants, contributors and presenters in each conference for the past several years.
